Electric Chain Hoist Series Elektrokettenzugfamilie

This multi-branded electric chain hoist series is suited to handling loads from 63 to 2,500 kg and features a modular construction. Each chain hoist is protected by a robust aluminium housing, which can be easily opened for maintenance work. The ergonomic pendant control is rubber-coated to ensure a firm grip. When the pendant control is not in use, it can be fixed via an integrated magnet to any metal structure. The hook block possesses a specially formed recessed handle, while the upper part of the block also works as a trigger for the electrical limit switch.
